NAME
>   wimdir − List the files contained in a WIM image

SYNOPSIS
>   **wimdir** *WIMFILE* [*IMAGE*] [*OPTION*...]

DESCRIPTION
>   **wimdir**, or equivalently **wimlib-imagex dir**, lists the files and directories contained in the specified image of the Windows Imaging (WIM) archive *WIMFILE*.
>
>   *IMAGE* specifies the image in *WIMFILE* to list. It may be the 1-based index of an image, the name of an image, or the keyword "all" to specify all images. It may be omitted if **WIMFILE** contains only one image. You can use **wiminfo**(1) to list the images contained in *WIMFILE*.

OPTIONS
>   **--path**=*PATH*
>>   List the files under *PATH* instead of under the root directory.
>
>   **--detailed**
>>   List detailed information about each file.
>
>   **--one-file-only**
>>   List information about the specified file only. Intended for use with both **--path** and **--detailed**.
>
>   **--ref**="*GLOB*"
>>   File glob of additional WIMs or split WIM parts to reference resources from. This option can be specified multiple times. This option is only useful when **--detailed** is also specified.

NOTES
>   **wimdir** supports split WIMs, but it only works on the first part of the split WIM.
>
>   Detailed metadata such as timestamps and data streams is not shown unless the **--detailed** option is used.

EXAMPLES
>   List all files and directories in the first image of 'boot.wim':
>
>>   wimdir boot.wim 1
